

millnet

# millnet, your powerful, tailor-made project & workflow management tool

## Allowing you to monitor and manage progress in a clear and intuitive environment

At Miller Graphics we understand the world is changing faster than ever and this will impact consumer behaviour and expectations. Technological advances and constantly shifting market conditions present real challenges as well as opportunities for our customers and partners. millnet's robust and streamlined workflow management tools make it easier for your business to meet these challenges head on. By helping to bring complex and chaotic processes under control, by increasing collaboration, transparency and accountability between stakeholders, by improving productivity, quality, efficiency, time and consistency. millnet can easily be connected to your existing PIM, DAM or ERP system and by reducing the time and costs involved in bringing products to market.

millnet is suite of modular yet integrated web services that can be implemented in full or in part. A key strength of millnet is its configurability, with advice and support we'll help you to quickly implement the features and functions that bring the greatest value to your processes, creating a

bespoke solution for the unique needs of your business. At Miller Graphics we understand that 'one size' does not 'fit all' and the user experience can be entirely customised to provide the most streamlined and secure experience.

### Project & process management

millnet allows you to manage projects and workflows with ease. From entire ranges to individual tasks for a single product, from new product development projects to single SKU modifications, create briefs online and manage your activities with a set of sophisticated, yet simple to use interfaces. Assign tasks and workflows across multiple stakeholders, monitor and manage progress in a clear and intuitive environment. Making sure you never miss a deadline!

### Data & deliverables management

Data is one of your most valuable assets! Collect and validate data, components and deliverables in a single online archive with process driven workflows connected to your system. millnet allows you to record, validate, and maintain key data such as product information and pack copy and then extract every last ounce of value from it:

- Use your data to create intelligent packaging artwork
- Transform your packaging equity into exciting 3D models and animations
- Repurpose your data for use in all your marketing channels
- Share validated data and components with stakeholders and partners
- Manage changes in a secure and synchronised way across all your assets
- Manage project and SKU components with a user-friendly file management system

### Collaborative online approval

A sophisticated online approval tool is a prerequisite for any system dealing with packaging artwork. millnet takes this a step further by dynamically creating approval cycles based on rules you

specify, reducing the workload for Project Managers and ensuring the correct stakeholders and individuals are always involved, thereby reducing the risk of errors. From simple single person file validations to complex multi-stakeholder, multi-departmental approval cycles with concurrent or consecutive approval routines, the potential for configuring approval in millnet is almost limitless. Use millnet to launch approval cycles on files you supply directly through the system using your PIM, DAM or ERP system. millnet uses industry leading online viewing tools for inspecting graphics files. All responses, comments and annotations are stored and fully traceable.

### Extensive file processing

At Miller Graphics we are experts at dealing with graphical files and we have extensive resources for interrogating and processing files for a range of purposes. Take advantage of our resources and expertise by using our online services for file processing. Some examples of this are:

- Upload a design file and receive back an automated pre-flight report
- Upload a print ready file and let millnet create separations and then distribute them for approval
- Upload a repro file, let the system process the file and then transfer it on to the plate making department

### Collaboration using chats

The inbuilt messaging tools in millnet allow you to collaborate in a more informal way. Share ideas freely in open or private conversations. millnet allows you to have the freedom of free discussion in a familiar messaging interface whilst keeping track of the decision-making process. Discussions can be closed off with a formal 'instruction', and the history of the entire discussion is maintained.

### Connecting you wherever you are

We understand that many of our customers and partners have existing systems of their own that already add value to their processes. To save cost, time and effort for customers and partners and to reduce the risk of errors or duplication in the process, we offer a range of integration services including:

- Import and export of job and / or product data
- Multiple formats (XML, JDF, csv, Excel, etc.)
- Automate system to system or via email person to person or mixed

All this means that you are able to take advantage of the features in millnet without increasing your administrative burden and adding the risks associated with duplicate data entry.

### KPIs & reporting.

millnet records vast amounts of data, providing possible metrics for every type of activity in the system. We will work with you to create a set of KPIs and reports that will allow you to drive improvement through your entire supply chain. millnet gives you 24/7 access to your data.

- millnet is used by all our sites in every region
- Fully configurable for your teams needs
- Full transparency, you know exactly what to do and when to do it
- Create specific workflows e.g. design, NPD and project manage these
- Drive automation and deliver on quality
- Allows you to create tailor-made reports 24/7

*“The potential for configuring approval in millnet is almost limitless”*
